5G Vision – Enabling New Verticals & Use Cases

5G Vision – Enabling New Verticals & Use Cases

5G Vision – Enabling New Verticals & Use Cases

5G Key Technology Components

#1 New spectrum

#2 Beamforming

#4 Dual-connectivity

#3 Slicing and flexibility

- Multi-service
- Flexibility
- Lean carrier

#5 Edge computing

5G Architecture Options in Release 15

NSA = Non-Standalone
SA = Standalone

Why Dual Connectivity with NSA?

Option 3x | **LTE+5G under EPC**

- Available 6 months earlier than SA
- Existing EPC core used
- Existing LTE idle mode used
- Data rate aggregation LTE + 5G
- VoLTE in LTE

Why Standalone SA?

Option 2 | **SA 5G under 5GC**

- 5G end-to-end for new services
- Lower latency without LTE leg
- Lower setup time in 5G

Evolution of Non-Standalone Option to 5G Core

Option 3

EPC core

5G core

Option 4

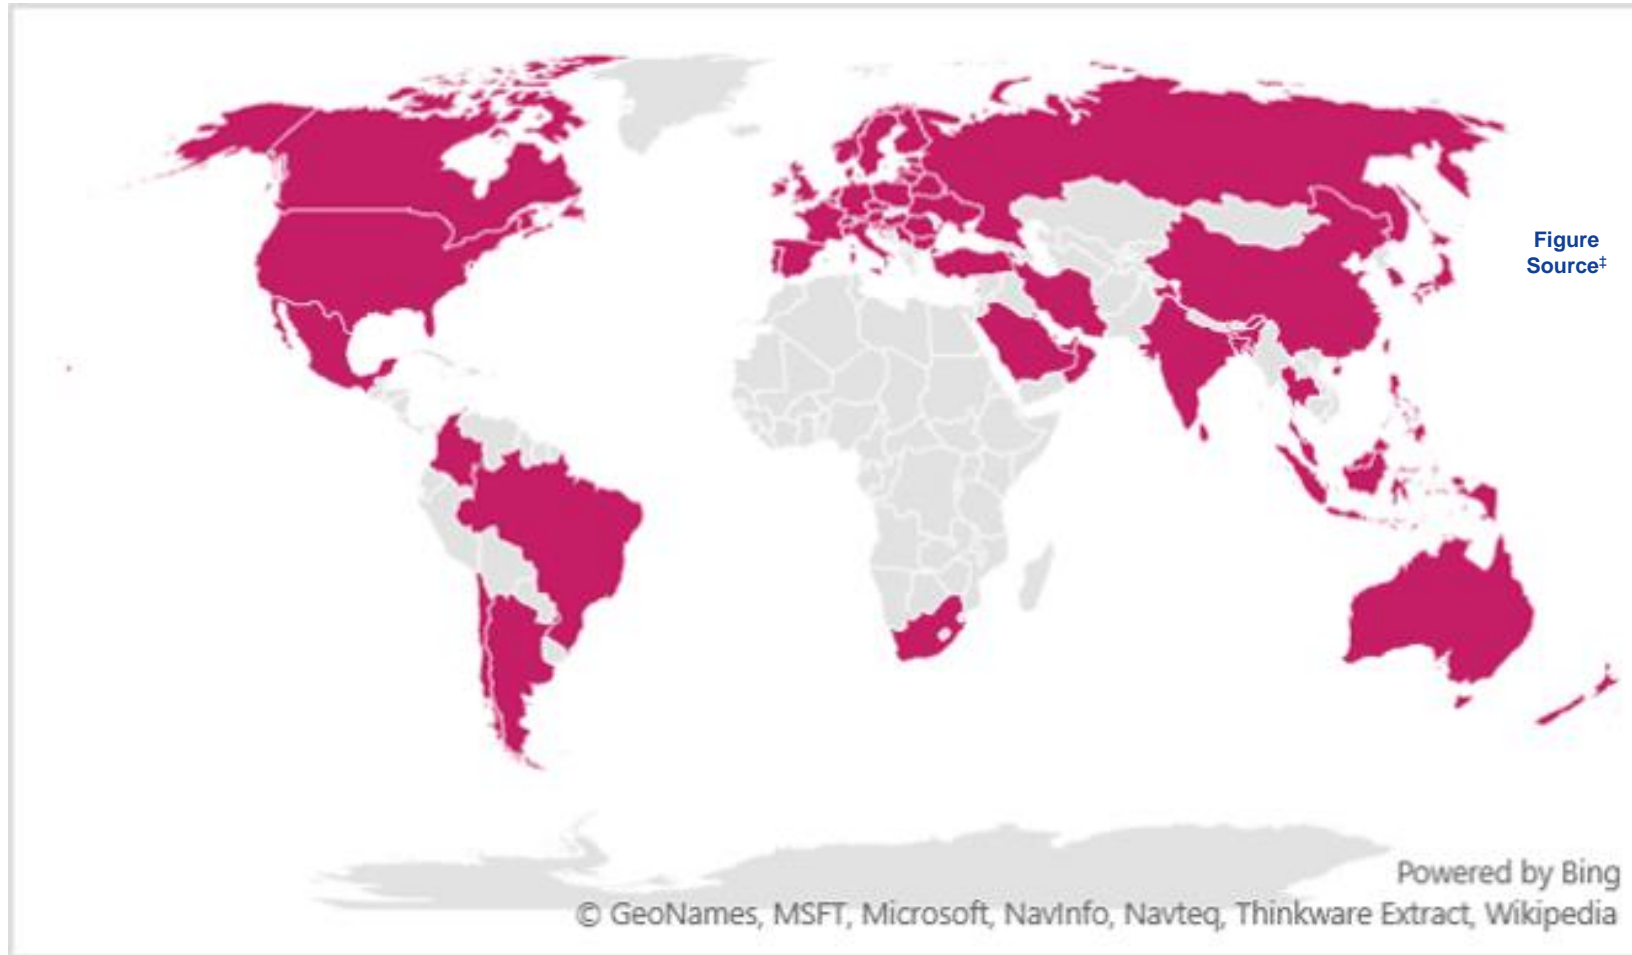

Control plane in 5G

Option 7

Control plane in LTE

5G Technology Adoption

- ‡GSA has identified **154 operators in 66 countries** that have demonstrated, are testing or trialing, or have been licensed to conduct, field trials of 5G-enabling and candidate technologies
 - **Up from 134 operators in April 2018**

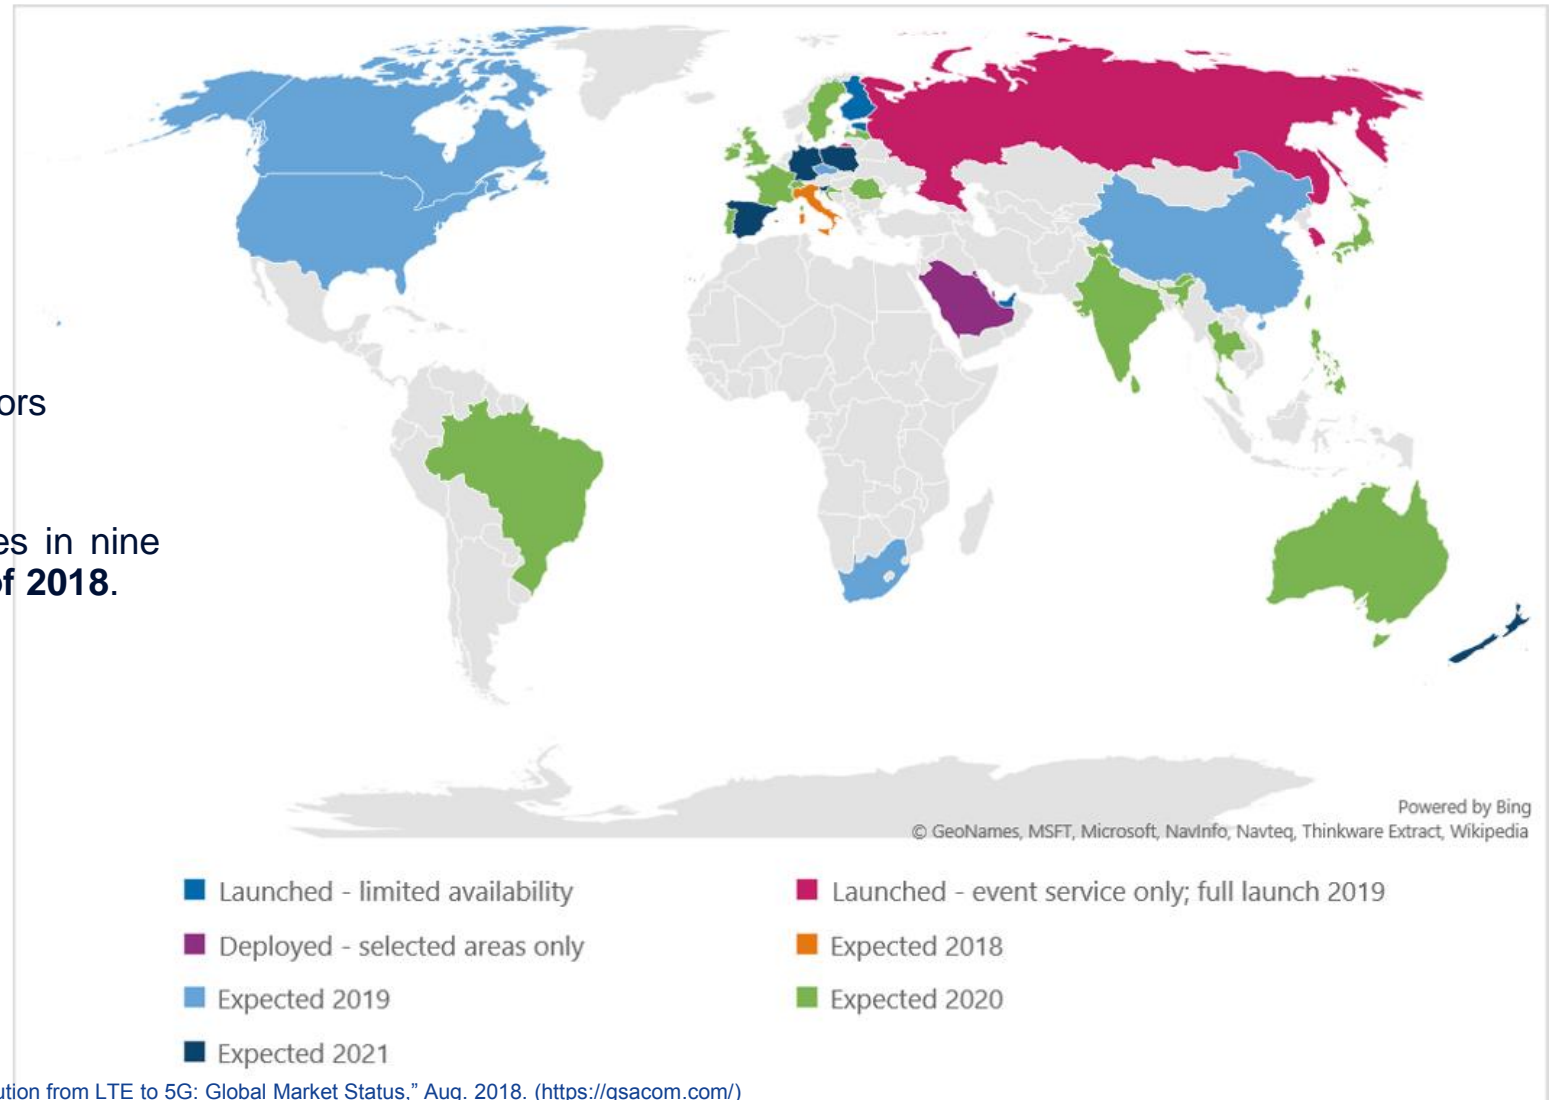

5G Technology Adoption Deployment Plans

67 telecom operators in **39** countries that have announced intentions of making 5G available to their customers between **2018 – 2022**

Figure only includes countries where operators have announced their plans

Beyond limited scale launches, ten launches in nine countries planned to take place by the **end of 2018**.

5G-Xcast – Unified Framework for Common Content Delivery

5G-Xcast Consortium

**Xcast: An efficient combination
of uni-, multi-, and broad-cast
transmission mechanisms**

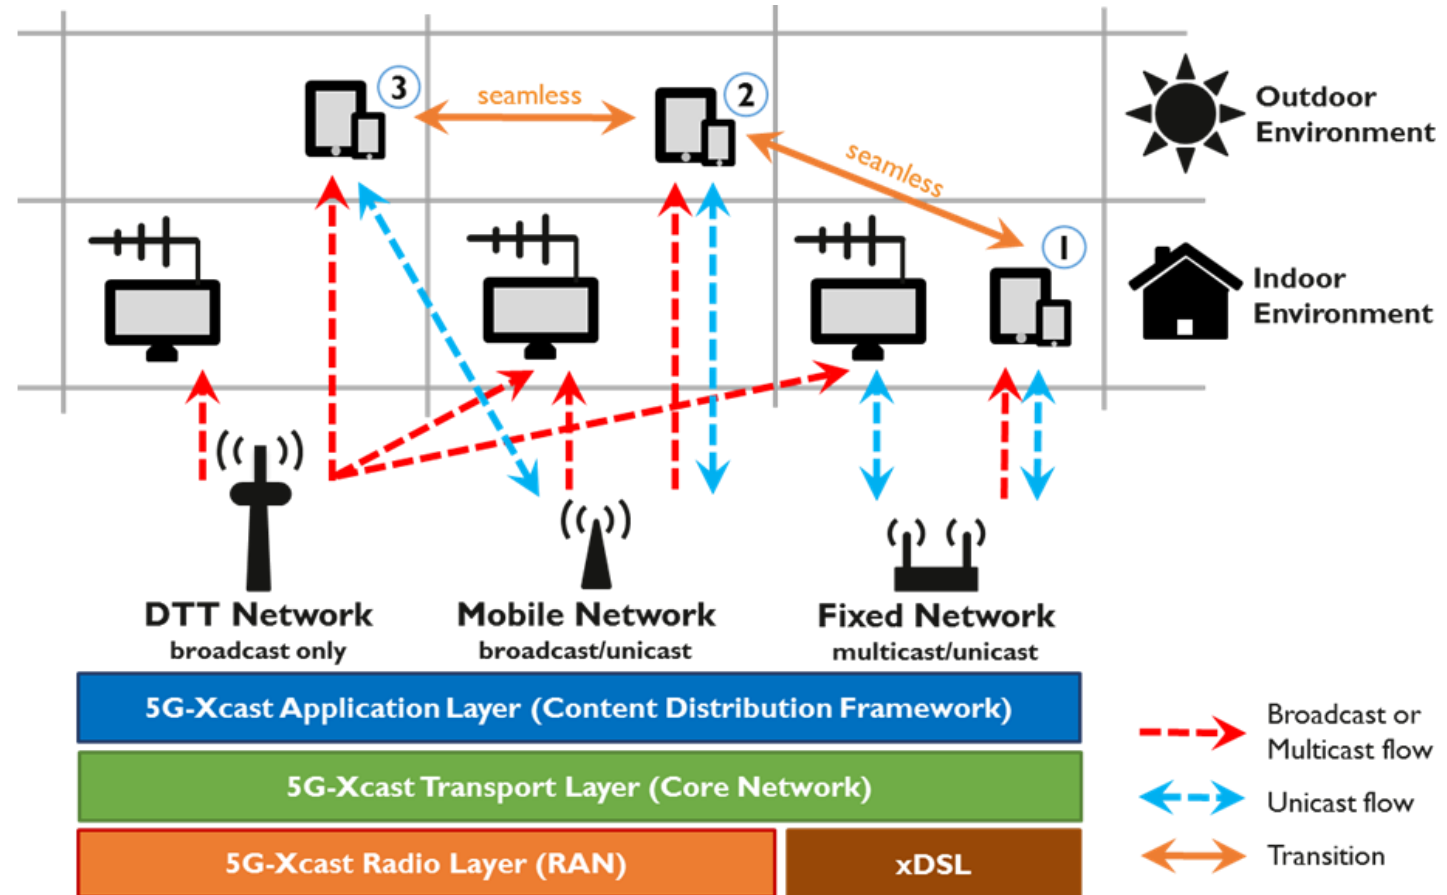

- Broadcast and Multicast Communication Enablers for the Fifth-Generation of Wireless Systems (5G-Xcast)
 - Start and end date: June 2017 – May 2019 (24 months)
 - European Union funded project; Call **H2020-ICT-2016-2**; Grant Number: **761498**

Convergence Vision

The **converged media delivery architecture of 5G-Xcast over fixed broadband, mobile broadband and terrestrial broadcast networks** allows a **seamless, uninterrupted service** to be offered to the users as they move.

5G-Xcast Vision

Multimedia & Entertainment

- UHDTV delivery
- VR, AR, 360° video
- Content prepositioning
- Push to X (talk/video)

Automotive

- Autonomous driving information
- Infotainment
- Safety applications
- Signage information

Internet of Things

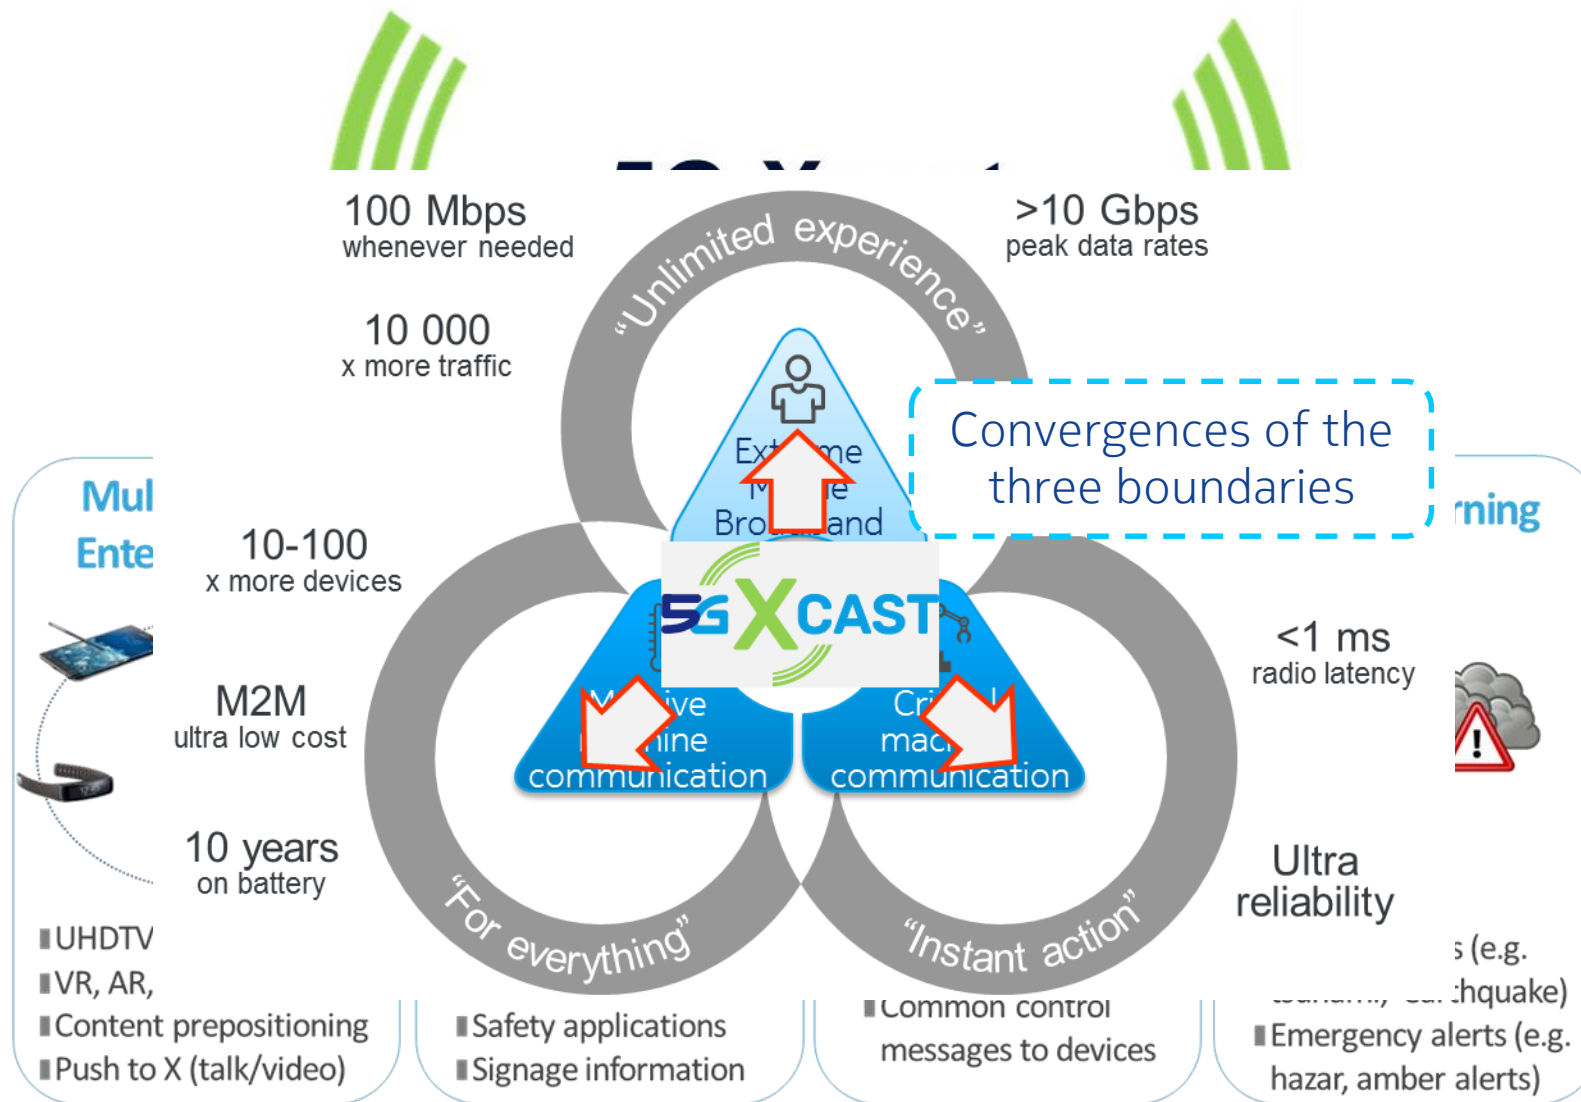

- Software & firmware updates
- Common control messages to devices

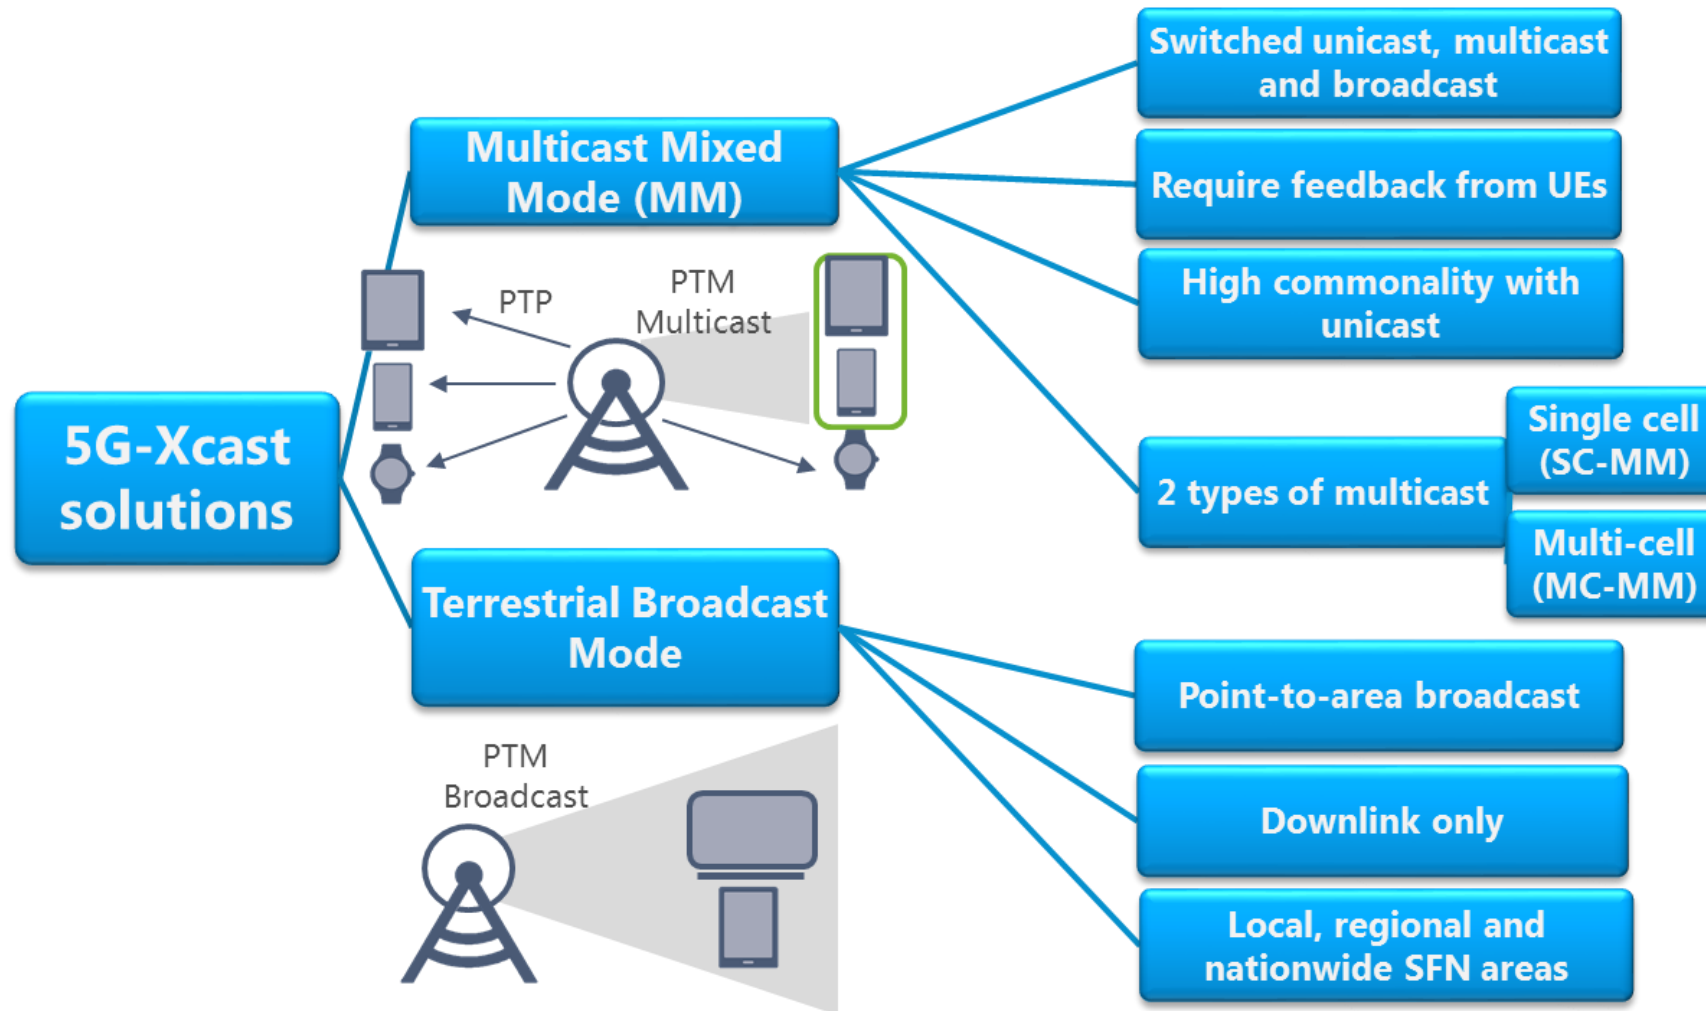

Public Warning

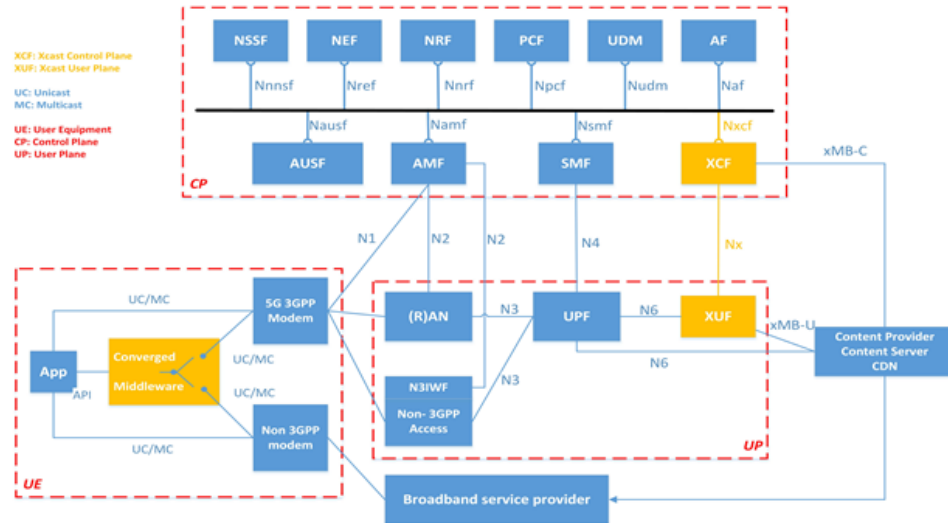

- Disaster alerts (e.g. tsunami, earthquake)
- Emergency alerts (e.g. hazar, amber alerts)

Multicast Mixed Mode and Terrestrial Broadcast Mode

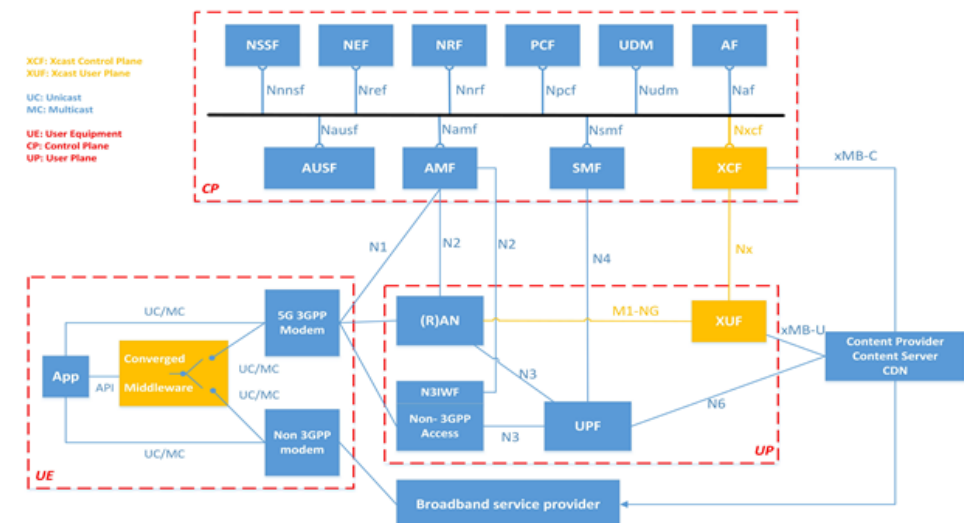

(1) 5G Unicast Evolution – Transparent Mode

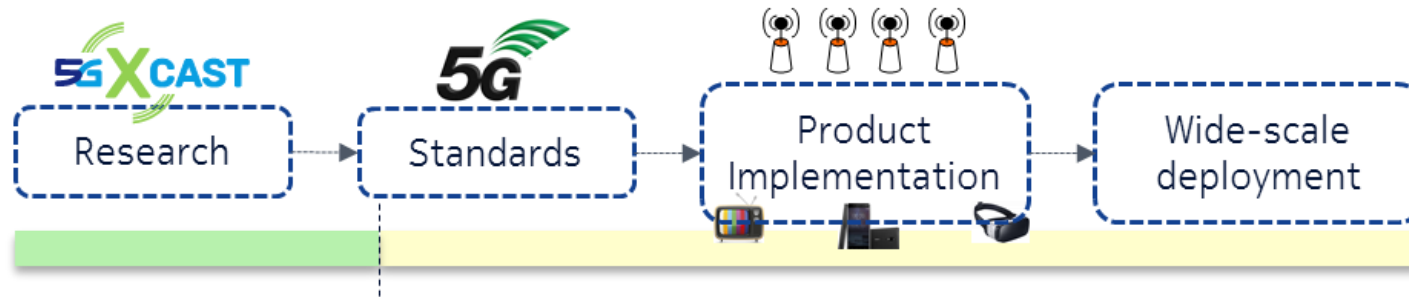

E2E 5G-Xcast architecture, based on Rel-15 5G Service Based Architecture (SBA)

(2) LTE Evolution

- Analysis of the limitations of multicast/broadcast capabilities in LTE and designed building blocks to enable multicast/broadcast in the service-based 5G architecture (D4.1)
- Description of the key drivers, benefits and use cases for full fixed-mobile network convergence (D4.2 on-going) and call flows (D4.3 on-going)
 - **D4.1:**

5G-Xcast and 3GPP from Vision to Reality

5G NR Mixed Multicast-Unicast Mode

- Terrestrial Broadcast

LTE-based Terrestrial Broadcast Mode

5G Value Proposition

EBU

- MNOs / BNOs
 - Simplified and efficient transport, with reduced transport network load and total cost of ownership for Xcast content
 - Leveraging OTT innovations and ecosystem partnerships
 - Novel collaborations with content providers for advertisements / new revenue streams, efficient transport of '*elephant pipes*'
 - Supporting new business models using AR/VR deployments

- Content Providers
 - Controllable QoE and seamless multi-access connectivity with Xcasting
 - Access to the massive and global end-to-end 5G ecosystem

- UE Vendors
 - Simplified implementation with minimal testing complexity
 - Empowering new use cases and features with minimal added cost
